ISA Technologies collaborates with Schlumberger to provide leading-edge technology to the Asia Pacific region

In a breakthrough for the oil and gas industry in Asia Pacific, Western Australian company ISA Technologies today announced that it is working with Schlumberger, the world's leading supplier of information solutions for the oil and gas industry.

Schlumberger has a number of information centres around the globe and has chosen to work with ISA Technologies in Australia to expand their capabilities by providing local companies with access to their unique, multi-platform explorations and production (E&P) applications.

ISA has installed the Schlumberger LiveQuest^{*} ASP solution on the computer systems in their High Performance Computing and Visualisation Centre in order that companies in the region can access leading-edge software solutions 'as and when' required.

The Department of Industry and Resources in Western Australia have signed up as the first client to utilise the LiveQuest solution via ISA Technologies' Visualisation Centre.

Mark Gabrielson, General Manager, Petroleum and Royalties Division, Department of Industry and Resources WA commented, "We recognise the improved cost benefits of the new ISA/Schlumberger offering, and as such, the Department will now access the LiveQuest solution via ISA's facilities, rather than using the solution on our own infrastructure."

ISA Managing Director, Sil La Puma noted, "We are thrilled to be working with Schlumberger to provide a first class service offering for the Asia Pacific region and equally as thrilled to have signed up our first client, The Department of Industry and Resources."

"Given the current resources boom in Western Australia we are very excited by the enormous opportunities that we see this collaborative offering to the region," he added.

-more-

LiveQuest is a unique solution that enables collaborative access to multiplatform E&P applications such as GeoFrame, and ECLIPSE, providing flexible, reliable and secure data and application access, including 3D visualisation applications.

The LiveQuest solution enables users to securely access and share applications and data anywhere, at anytime via a web browser, eliminating the need to have costly and complex internal IT infrastructure.

LiveQuest also allows users to run high-end visualisation software on a laptop or PC connected to a corporate intranet or the internet, enabling easy, remote collaboration on projects in 'real time'.

About ISA Technologies

Established in 1987, ISA Technologies is a specialised information technology company that offers a range of industry leading ICT products and services which enable clients to 'turn ideas into reality'.

With offices in Perth, Australia and Kuala Lumpur, Malaysia, ISA's business focus extends across the entire Asia Pacific region, where the company has a large number of corporate and government clients.

ISA offers world class expertise across a myriad of ICT areas, ranging from High Performance Computing and Visualisation, network design, infrastructure management support and outsourcing, to implementation and management, e-business systems and software engineering, including enterprise software design and solutions development.

ISA is also involved in product research and development in areas as diverse as bioinformatics, geophysics, fluid dynamics and image processing and recognition.
