

MEDIA RELEASE – 9th April 2009

ISA TECHNOLOGIES RECIPIENT OF AWARD FOR INTERNETLITE AT AIAS ANNUAL iAWARDS

ISA Technologies is the winner of a prestigious iAward from the Australian Information Industry Association (AIIA) in the e-Government category for its InternetLite internet starter kit.

InternetLite was developed as a result of ISA Technologies supporting Microsoft Office Share Point Server 2007 software development and identifying the need for a starter kit for Public Sector web sites.

“ISA Technologies originally developed InternetLite as a framework that provides developers with a base template, incorporating the common website elements and standards set by the Western Australian Government, to start building websites for government agencies”, said Mr Lou Martini, Country Manager for ISA Technologies.

“The framework is developed in Microsoft Office Share Point Server 2007 and supports a step by step approach to development of web sites, making it easier and cheaper to provide all the key elements needed in accordance with e-Government guidelines”, said Mr Martini.

ISA Technologies is a specialist information technology company based at Western Australia’s Technology Park in Bentley and is focused on High Performance Computing (HPC), 3D visualisation, advanced high speed networks, e-business systems, software engineering, operations management

and security.

ISA Technologies is a Gold Partner of Microsoft which works extensively with the Microsoft .NET Framework and Microsoft Office Share Point Server 2007 as well as supporting Microsoft HPC Server 2008.
